PRISMA 2020 checklist for the systematic review reported in Section 3

Supplementary material to: Drift-Aware Meta-Adaptive Anomaly Detection for Few-Shot, Non-Stationary Industrial IoT Streams: A Benchmarking Protocol and the DAMAD Detector

Abhijeet Chandrakant Karve, Santosh Darade

The review in Section 3 of the manuscript is a systematic mapping review of methods: it identifies, screens and classifies published meta-learning anomaly and fault detectors on a four-dimensional taxonomy. It contains no quantitative synthesis, no effect measures and no risk-of-bias assessment, so the PRISMA 2020 items that concern those parts are marked “not applicable” below, with the reason. Items are from Page et al., BMJ 2021, 372:n71. “Location” gives the section, table or figure of the manuscript where the item is reported.

#	Item	Location in manuscript / response
1	Title: identify the report as a systematic review	The title names the benchmarking protocol and the detector; the abstract’s second sentence identifies the systematic review of 66 papers. The review is one of three contributions of the paper, not the whole paper.
2	Abstract: structured summary	Abstract: sources period (2020–2025), number of included papers (66), main finding (no method combines meta-learning with online adaptation on an industrial benchmark).
3	Rationale	Section 1, paragraphs 3–4; Section 2.3.
4	Objectives	Section 1 (contribution 1); Section 3, opening paragraph.
5	Eligibility criteria	Section 3.1, Table 1 (IC1–IC3, EC1–EC4).
6	Information sources	Section 3.1: IEEE Xplore (export dated 28 September 2026) and Lens.org, which aggregates Crossref, PubMed, Microsoft Academic and OpenAlex; period January 2018 to December 2025.
7	Search strategy	Section 3.1 gives both search strings in full and states the field scope (“All Metadata”) used on IEEE Xplore. The raw exports are released with the code (review/raw/).
8	Selection process	Section 3.1: three-stage screening (keyword pre-screen, publication type, title-and-abstract reading); screening by one author; no automation beyond the keyword pre-screen, whose terms are listed.
9	Data collection process	Section 3.1 and 3.2: codes on the four axes assigned by one author from titles, abstracts and keywords; every decision and its reason recorded in the released screening sheet (review/screening_final.csv).

#	Item	Location in manuscript / response
10a	Data items: outcomes	Not applicable: no outcome data were sought; the data items are the four taxonomy codes (Section 3.2).
10b	Data items: other variables	Section 3.2 defines the four axes and their codes (D1 paradigm, D2 mechanism, D3 streaming capability, D4 validation); year and venue also recorded (Table S1).
11	Study risk of bias assessment	Not applicable: a mapping review of methods; no risk-of-bias tool was applied. Stated as a limitation in Section 3.1.
12	Effect measures	Not applicable: no effect measures.
13a–f	Synthesis methods	Not applicable: no statistical synthesis. The included papers are tabulated by code (Section 3.2, Figure 1, Table 3, Table S1) and counted per cell of the taxonomy.
14	Reporting bias assessment	Not applicable.
15	Certainty assessment	Not applicable.
16a	Study selection: results	Section 3.1 and Table 2: 788 records, 93 duplicates, 695 screened, 466 excluded at the keyword stage, 29 by type, 136 at title-and-abstract level, 64 retained, 2 added from reference lists, 66 included. Flow diagram: Figure S1.
16b	Studies excluded that appeared to meet criteria	Section 3.1 gives the counts and reasons per exclusion criterion; the released screening sheet lists every excluded record with its reason.
17	Study characteristics	Table S1 (all 66 papers: year, first author, title, venue, four codes, DOI); Table 3 (representative papers).
18	Risk of bias in studies	Not applicable (see item 11).
19	Results of individual studies	Not applicable: no outcome data. Each paper’s codes are given in Table S1.
20a–d	Results of syntheses	Not applicable: no statistical synthesis. Counts per axis and per cell are reported in Section 3.2 and Figure 1.
21	Reporting biases	Not applicable.
22	Certainty of evidence	Not applicable.
23a	Discussion: interpretation	Section 3.3 (three findings); Section 8.1.
23b	Limitations of the evidence	Section 3.3 and Section 8.1.
23c	Limitations of the review process	Section 3.1, final paragraph: no full-text stage; single screener; no inter-rater agreement; codes taken from abstracts. Section 8.3.
23d	Implications	Section 3.3; Section 4 (the protocol follows from the review’s evaluation findings); Section 9.
24a	Registration	The review was not registered.

#	Item	Location in manuscript / response
24b	Protocol	No protocol was prepared in advance; the procedure is described in Section 3.1 and the screening sheet records every decision.
24c	Amendments	Not applicable.
25	Support	Funding statement: no external funding.
26	Competing interests	Conflicts of Interest statement: none.
27	Availability of data, code and other materials	Data Availability Statement: raw database exports, merge and screening scripts, the full screening sheet with reasons, the taxonomy codes and the scripts that produce Table 2, Figure 1 and Table S1 are in the public repository.
